

ASSESSMENT

NAME:PAVITHRA L

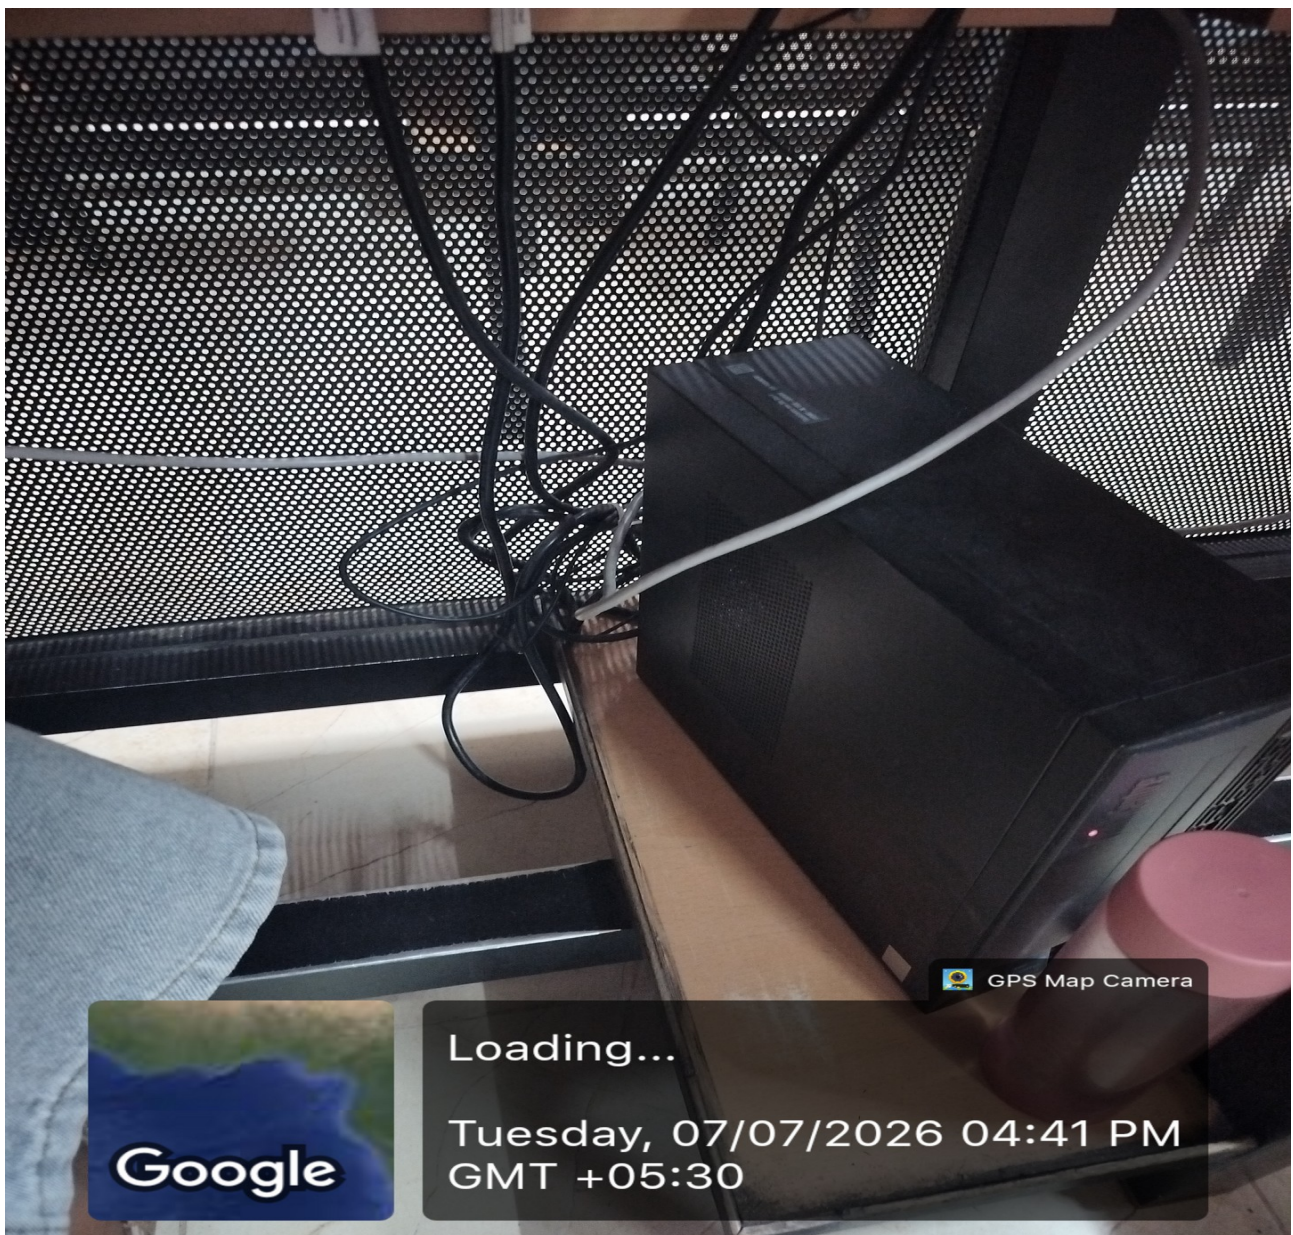

REGNO:23MIS0160

Bad Design 1:POOR CABLE MANAGEMENT UNDER COMPUTER DESK

Description:

The computer system has several cables hanging and tangled under the desk. The CPU and other electronic device are placed in congested area with cables crossing each other, making the workspace difficult to maintain.

Source of Photograph:

Place:SJT,Vellore Institute Of Technology,Vellore - LAB

Reasons why the design is bad:

- 1.Loose and tangled cables make area look unorganised
- 2.Cables can accidentally be pulled or disconnected
- 3.Hanging cables may cause difficulty during cleaning and maintenance

Suggested improvement:

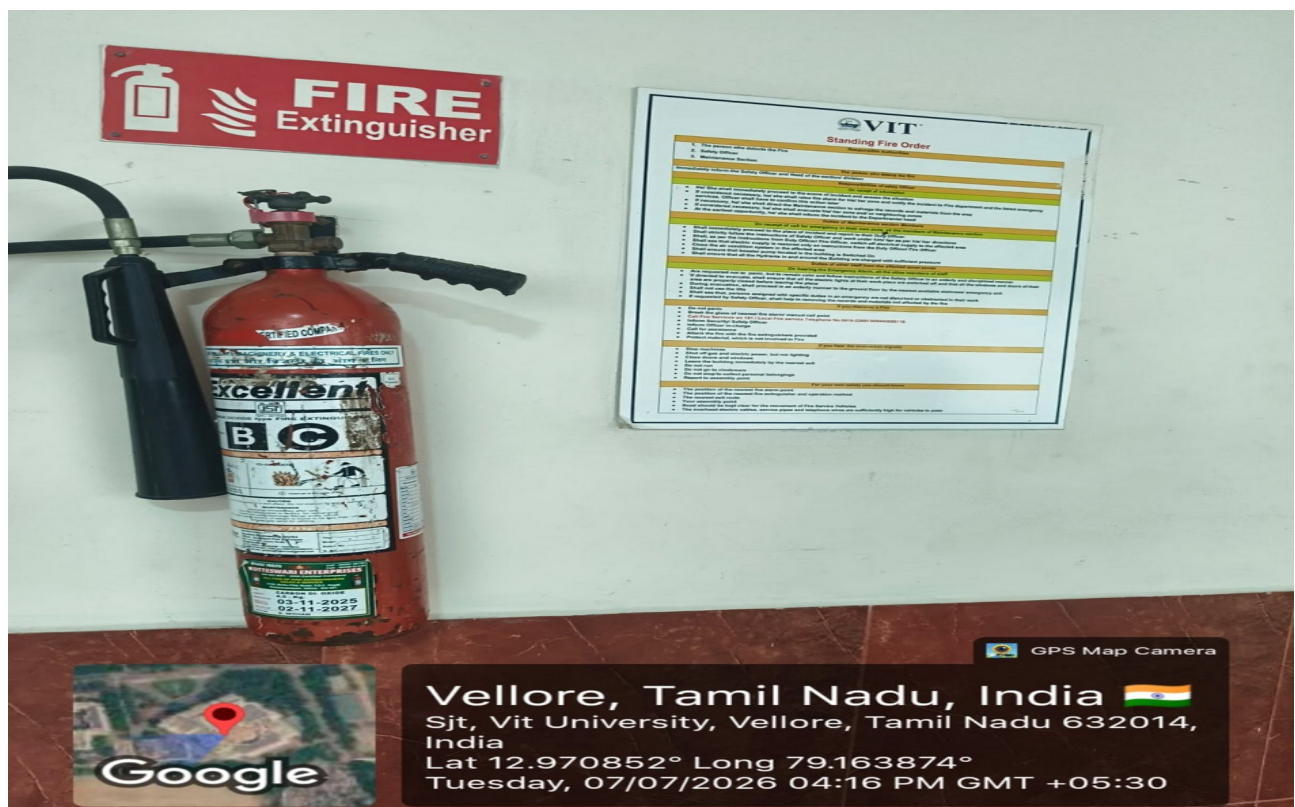

- 1.Keep the CPU and cables properly arranged
- 2.Install cable trays under the desk
- 3.secure cables under the desk instead of allowing them to hang

Bad Design 2:Fire extinguisher instruction difficult to read

Description:

The fire extinguisher is installed next to an emergency instruction board containing a large amount of information in very small text.

Source of Photograph

Place:SJT,Vellore Institute Of Technology,Vellore

Reasons why the design is bad:

- 1.The instruction text is too small to read quickly
- 2.Users may take more time to understand the instruction
- 3.Too much information is presented on a single board.

Suggested improvement:

- 1.Increase the font size.
- 2.Use simple diagrams
- 3.Reduce unnecessary information on board

Bad Design 3:Inconvenient Push type drinking water tap

Description:

The drinking water tap releases water only while the user continuously presses and holds the push button

Source of Photograph:

Place:SJT,Vellore Institute Of Technology,Vellore – Drinking water area

Reasons why the design is bad:

- 1.Users must continuously press and hold the button to get water
- 2.It is difficult to fill water bottles using one free hand
- 3.Filling large bottles becomes uncomfortable

Suggested improvement:

- 1.Use a lever type tap that is easier to operate
- 2.Install a sensor based automatic water tap
